

**Affordable and flexible charging infrastructure for electric mobility.**

The solution that convinces providers and users alike.

# The charging and billing solution that matches your needs.

Electric mobility is taking off. A challenge for anyone who wants to work with charging infrastructure. After all, it's all about finding a smart solution with lasting efficiency.

Opt for ubitricity's MobileCharging system with its SimpleSockets: the charging spots are affordable, quick to install and can be operated with next to no running costs.

- ✓ Invest in an affordable charging infrastructure accessible for all user groups.
- ✓ Put your trust in charging infrastructure that has an economic future.
- ✓ Benefit from installation variants that allow flexible use of charging points everywhere.

The different installation variants provide the right solution for every requirement – whether for a local community, hotel, car park, trade or the food service industry. Become a charge point provider today and equip yourself for the electro-mobile future – with ubitricity as a partner who offers you comprehensive service.

- ✓ Complement existing infrastructure with ubitricity's compatible and accessible solution.
- ✓ Opt for sound technology that is already being used with great success.
- ✓ Profile your organization as a provider of a future-proof solution for electric mobility.

## The installation variants – always the right solution

Due to the different installation and billing options, the SimpleSockets offer you and your customers full flexibility. With the SimpleSocket and the SimpleSocket<sup>Plus</sup>, you create

diverse infrastructure accessible for all user segments. ubitricity takes care of the billing between all parties involved and the related processes.

Wall-mounted

Stand-alone

Light-pole integrated

# An open and flexible system for both providers and users.

For EV drivers, the possibility to charge their vehicles is an important criterion when deciding to head for certain locations. This is a good argument for becoming a charge point provider even today. Both users of the ubitricity SmartCable and those with a standard charging cable can charge their vehicles at the SimpleSocket<sup>Plus</sup>. In both cases, they receive transparent bills for their charging costs.

And as a provider, you don't need to worry about anything. The ubitricity service also includes commissioning of the charging spots as well as installation and maintenance options for the electrical equipment. This ensures one-stop service for you and gives the users of your charging spots a good reason to return to you.

## Your charging spots – accessible, simple, convincing.

### Installation and service

Whether on a wall, free-standing on a bollard or integrated in a lamp post – there is a suitable installation variant for anywhere that has an electricity supply. Service providers from ubitricity can take care of the installation and any maintenance work. You don't need to worry about billing the charging operations either. ubitricity will take care of everything for you – simple and convenient.

### Charging using the SmartCable

An increasing number of drivers are using a SmartCable, the intelligent charging cable with a mobile meter. For this purpose, they have signed a contract with a mobile power provider of their choice. The conditions stipulated in this contract apply to the charging operation, which commences as soon as the SmartCable is connected to the SimpleSocket. In this case, the provider bills the energy costs to the user with an exact break-down to the kWh.

### Charging at the SimpleSocket<sup>Plus</sup>

This charging spot is equipped with an additional DirectAccess feature and enables users with standard charging cables to charge with a time-based tariff set by the charge point provider. To do so, the user simply scans the QR code on the SimpleSocket<sup>Plus</sup> and is then directed to a landing page. There, they select their desired charging time and pay a transaction-based tariff for the charging time online using their credit card.

### The benefits for you as a charge point provider

If you choose ubitricity's charging infrastructure, it's simple to implement charging spots affordably. At the same time, you will be offering all users the possibility to charge their vehicles with you – whether via a SmartCable or via the DirectAccess functionality of the SimpleSocket<sup>Plus</sup> using a standard charging cable. In doing so, you are a forerunner in choosing a sound, future-proof, and economically viable solution.
